

COMPRESS INNOVATIONS

POCKET PRESS[®] (CIED*)

Modern Pressure Bandages

*Designed by EP clinicians, specifically for *Cardiac Device Implants*

Not all pressure dressings are created equal.

Traditional pressure dressings provide inconsistent compression due to their make-shift construction. Issues can also include patient discomfort during wear and skin tears upon removal.

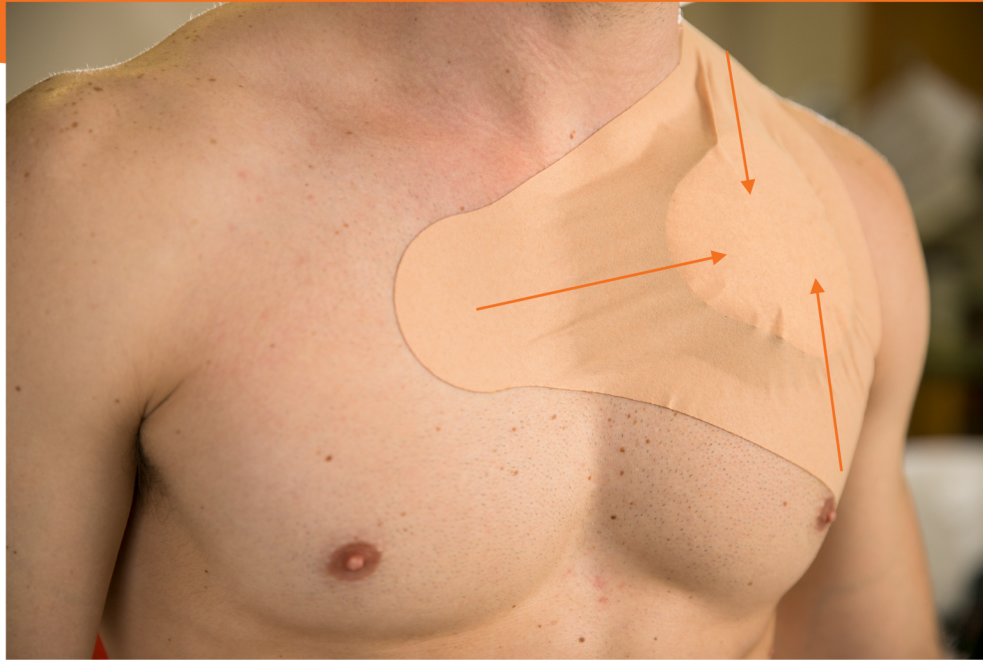

Leveraging our 20 years of experience in EP, we listened to you and created a pressure dressing specifically designed for pacemaker and ICD implants.

The Pocket Press *CIED pressure bandage is pre-made, easy to apply, skin-friendly and provides broad pocket compression.

EFFECTIVE DESIGN & FUNCTION

The 3-anchor design centers the compression over the device pocket

Pressure measurement reading, post-application of the Pocket Press

“In order to collapse the venous capillary vessels in the subcutaneous tissues, a (pressure) dressing should need to exert at least 8mmHg of pressure.”¹

EASE OF APPLICATION

Segmented release-liners
simplifies application

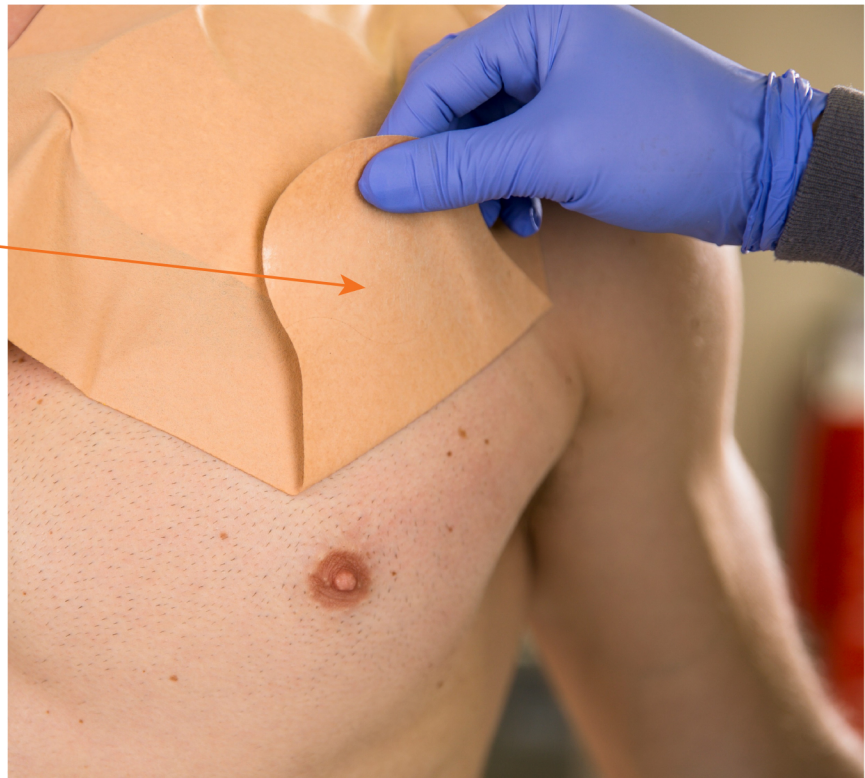

Compression insert delivers
broad pocket coverage

Thin-profile border
minimizes curling

EASE OF REMOVAL

Skin-friendly adhesive
minimizes skin tears
